Party Rental Operators:
You **can** do more than is
humanly possible
with a PRS Flatwork
Finisher

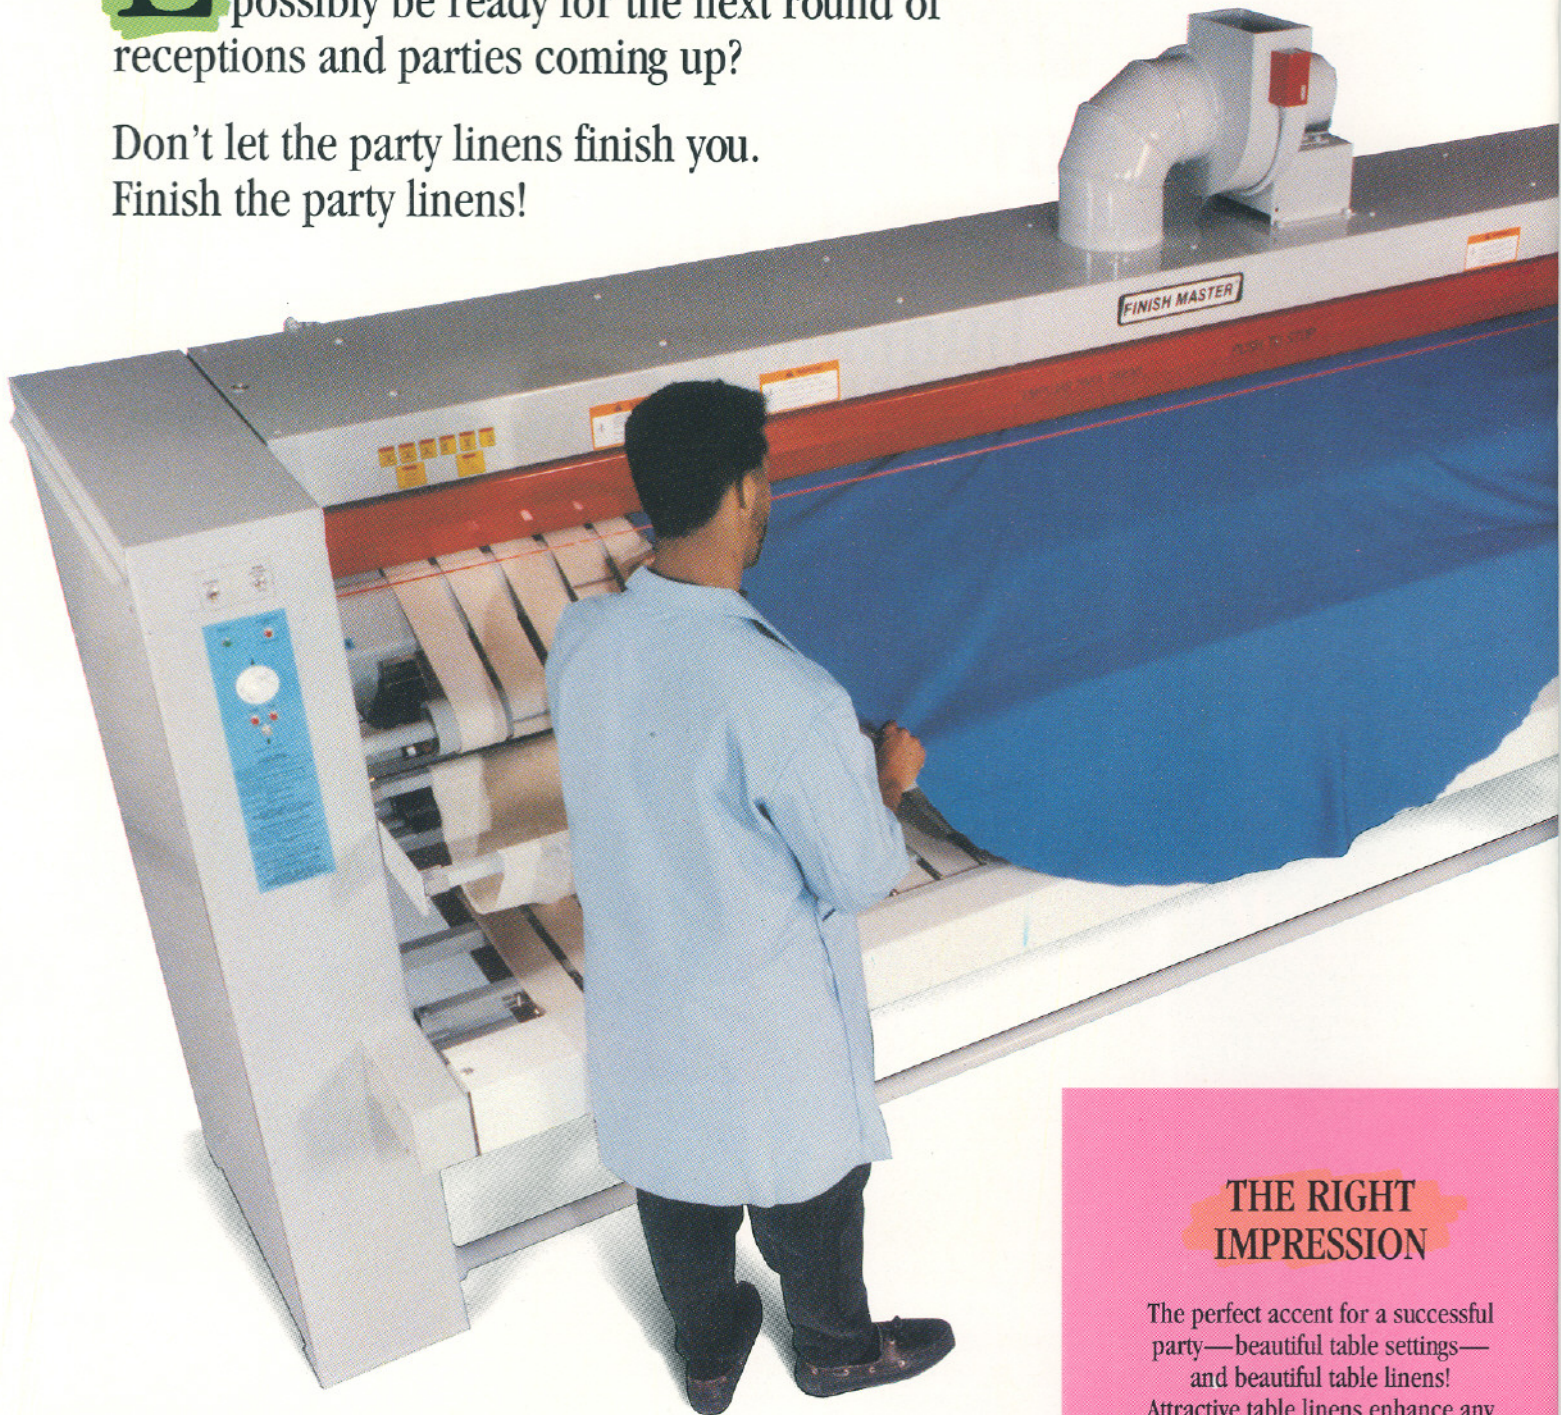

Ecstasy

PRS (Party Rental Spec

Ever been buried under a pile of returned table linens and wondered how they could possibly be ready for the next round of receptions and parties coming up?

Don't let the party linens finish you.
Finish the party linens!

THE RIGHT IMPRESSION

The perfect accent for a successful party—beautiful table settings—and beautiful table linens! Attractive table linens enhance any table setting, contributing to the overall success of every party—to the great satisfaction of every host and hostess.

Special) Flatwork Finishers

With the new flatwork finisher developed specifically for the party rental industry, those linens can be quickly, easily and economically processed—*in-house*. If necessary, table linens can be turned around in as little as a couple of hours. You don't have to be dependent on outside services or on temporary crews trying to finish more table linens by hand than is humanly possible.

The new, easy-to-operate PRS flatwork finishers are specifically designed to process—without folding—even those “party size” (126” and 132”) square and round table linens so popular in the industry. And, the finishing quality is superior to anything that can be achieved by hand!

PRS fabric finishers have a special 132” wide finishing roll capable of finishing even the largest 132” cloths without folding. This means superior finished quality, better appearance, faster production and considerably longer linen life as a result of eliminating the wear along the fold.

Because you can do more, and do it better with fewer people, it also means *a significant reduction in processing costs*. Users in the party rental industry report that the full cost of the machine is returned through labor cost savings in six months or less.

With a PRS flatwork finisher, your linen inventory is always ready for another party. And you can send it to that party with a rich, smooth, finished look that you—and your customer—can be proud of!

STOPPING ON THE CURVES

In addition to the extra wide finishing surface, PRS finishers have another unique and important feature: a foot operated, temporary stop device.

Large cloths, especially the round ones, occasionally need adjustment and smoothing as they are being fed into the finishing roll. To do this with complete safety, either operator can stop the forward motion of the machine and momentarily turn off the heat simply by stepping on a cable that stretches across the entire width of the unit. Needed adjustments can then be quickly made to the material. With removal of the foot pressure, the machine resumes operation and the heat to the finishing surface is back on.

MACHINE SELECTION

The exclusive “PRS” features are available on three leading Sharper Finish fabric finishers:

PRS CHALLENGER 1100

With its 12” diameter heated roll, this machine is able to process up to 50 132” round table cloths per hour. It is available with a front feed/front return which is ideal where space is limited. It is also available with a front feed/front *or* rear return so that additional operators can receive finished work at the rear during peak operations.

PRS CHALLENGER 1600

This unit has a 16” diameter finishing roll and can process up to 80 132” round cloths per hour. This unit, too, is available with a front feed/front return for two operators, or with the optional rear return for four operators.

PRS FINISHMASTER 1600

This top-of-the-line unit incorporates a 16” diameter finishing roll and an automatic folder and stacker to process up to 120 132” round cloths per hour. Two operators can handle the front feed/front return mode. The front feed/rear return mode requires only one additional operator.

The Winner

Considering these important benefits:

- Faster, lower cost processing.
- Smoother, more attractive table linens.
- Reduced linen wear.
- Quick availability of the entire linen inventory.

A PRS fabric finisher can make *you* the winner—at the finish line!

SPECIFICATIONS
